Randomized Evaluation Methodology Presented to Agricultural Research Project Participants

IPA Burkina Faso participated in the kick-off meeting of a research project launched by the National Institute for the Environment and Agricultural Statistics (INERA). The research project is a longitudinal descriptive study which aims to analyze the effect of agricultural research dissemination on the cultivation of cotton, maize, and rice in Burkina Faso. During the event, Nicolás Tomaselli (Country Representative, IPA) offered a seminar to civil servants participating in the research on the fundamentals of randomized evaluation methodology.
