Abstract

Can Information and Communication Technologies help citizens monitor their elections? We analyze a large-scale field experiment designed to answer this question in Colombia. We leveraged Facebook advertisements sent to over 4 million potential voters to encourage citizen reporting of irregularities and varied whether candidates were informed about the campaign in a subset of municipalities. Total reports, as well as evidence-backed ones, experienced a large increase. Across a wide array of measures, electoral irregularities decreased. Finally, the reporting campaign reduced the vote share of candidates dependent on irregularities. This light-touch intervention is more cost-effective than monitoring efforts traditionally used by policymakers. (JEL D12, C93, P16, O17)

Clientelism, voter intimidation and electoral fraud are part of the long list of electoral irregularities that persistently threaten democratic institutions in the developing world (World Bank 2017). Politicians draw on those different strategies, often combining several of them, as a way of distorting elections to their advantage. Beyond the direct consequences of undermining fair elections and eroding political accountability (Stokes 2005; Hicken 2011), a growing amount of evidence has shown that different types of electoral irregularities also

*We are grateful for the guidance provided by Diana Acemoglu, Esther Duflo and Ilya Olov. This paper has benefited greatly from the conversations with Alejo José G. Sison, David Greening, Leopoldo Figueroa, Ray Fisman, Juan Esteban, Ricardo Latorre, Monica Martinez-Soto, Tara Shroff, and all of the participants at the MIT Development and Political Economy Institute, the CPD working group at UC Berkeley and the RCT group at CEMFI. We would also like to thank Laura Pabón, Juliana Sarmiento and Diana Velasco at the Procuraduría General de la Nación, Esteban Salazar at PAREP and Melina Pabón, along with the other members of the MGE that helped us, and without whom this project would have not been possible. Last but not least, we are indebted to César Gutiérrez and Sebastián Gómez for their constant help designing the ads used in our interventions, and Estefanía Arellano for her outstanding research assistance. Funding for this project was generously provided by the J-Pal Governance Initiative, the Center on the Politics of Development (UC Berkeley) and the George and Anne Schuler Fund. The experiment was approved by MIT's IRB (the Committee on the Use of Humans as Experimental Subjects) with reference #100005405. The RCT is registered in the ISRA RCT Registry with unique identifying number "4414-RCTB-000405".
