The Cost of Convenience? Transaction Costs,  
Bargaining Power, and Savings Account Use in Kenya\*

**Abstract**

Individuals across the world use high-transaction-cost savings devices, even when lower-cost technologies are available. High costs may help savers protect resources from the demands of others. I investigate this hypothesis by randomly assigning ATM cards to 1,100 newly-opened bank accounts in rural Kenya. These cards reduced withdrawal fees by 50 percent. While the cards increased overall account use, the positive treatment effect is entirely driven by joint and male-owned accounts. I find evidence that these differences are driven by intrahousehold issues: household bargaining power is a key mediator of the ATM treatment effect.

*Keywords:* saving; intra-household bargaining; transaction costs

\*I thank Abhijit Banerjee, Esther Duflo, and Tamas Szil for invaluable advice and feedback. I am also grateful to Eric Edmunds, Dan Kerlan, Ben Ollen, Sandip Sukhtankar, and Rob Townsend for many useful comments. This project would not have been possible without the tireless assistance, hard work, and commitment of many employees of Family Bank. I am particularly indebted to Victor Keriri Mwangi, Steve Mwaroo, and Michael Aowani Wany. I also thank James Vincent and Norwen Makana for superb field management and the IPA field officers for their excellent assistance with the data collection. I gratefully acknowledge the financial support of the Russell Sage Foundation (project number 96-09-08), the George and Otis Shultz Fund, MIT's Jameson Poverty Action Lab, the National Science Foundation's Graduate Research Fellowship, and the Yale Savings and Payments Research Fund at Innovations for Poverty Action, sponsored by a grant from the Bill & Melinda Gates Foundation. Research activities were approved by Institutional Review Boards at MIT, the Kenya Medical Research Institute, Innovations for Poverty Action Kenya, and Dartmouth College. All errors are my own.
