EXPORTING AND FIRM PERFORMANCE: EVIDENCE FROM A RANDOMIZED EXPERIMENT"

> DAVID ATREN AMIT K. KHANDEDWAL ADAM OSMAN

We conduct a randomized experiment that generates emproves variation in the access to fourign markets for rag producers in Rgypt. Combined with detailed survey data, we essandly identify the impact of experiments of ram performance. Treatment firms report 18–00% higher profits and exhibit large improvements in quality alongoide reductions in output per hear substrict account from. These facility of an imply reflect firms being efford higher margins to

Exporting and Firm Performance: Evidence from a Randomized Trial

We conduct a randomized experiment that generates exogenous variation in the access to foreign markets for rug producers in Egypt. Combined with detailed survey data, we causally identify the impact of exporting on firm performance. Treatment firms report 16–26% higher profits and exhibit large improvements in quality alongside reductions in output per hour relative to control firms. These findings do not simply reflect firms being offered higher margins to manufacture high-quality products that take longer to produce. Instead, we find evidence of learning-by-exporting whereby exporting improves technical efficiency. First,

treatment firms have higher productivity and quality after controlling for rug specifications. Second, when asked to produce an identical domestic rug using the same inputs and same capital equipment, treatment firms produce higher quality rugs despite no difference in production time. Third, treatment firms exhibit learning curves over time. Finally, we document knowledge transfers with quality increasing most along the specific dimensions that the knowledge pertained to.
