

INNOVATIONS FOR POVERTY ACTION | COUNTRY PROGRAM BRIEF

Sierra Leone

In recent decades, billions of dollars have been spent on programs designed to reduce global poverty, but clear evidence on which programs succeed is rare, and when evidence does exist, decision-makers often do not know about it. Innovations for Poverty Action (IPA) is a research and policy nonprofit that discovers and promotes effective solutions to global poverty problems. IPA brings together researchers and decision-makers to design, rigorously evaluate, and refine these solutions and their applications, ensuring that the evidence created is used to improve the lives of the world's poor. Since our founding in 2002, IPA has worked with over 600 leading academics to conduct over 830 evaluations in 51 countries. This research has informed hundreds of successful programs that now impact millions of individuals worldwide. In addition to designing and conducting rigorous evaluations, we have a variety of other partnership models, from consulting with organizations on their monitoring and evaluation work through our Right Fit Evidence Initiative, to supporting governments with evidence generation and use through embedded labs.

IPA SIERRA LEONE

Since 2008

FOCUS SECTORS

Agriculture, Financial Inclusion, Gender, Governance, Health, Markets, Recovery, Social Protection

RESEARCH STUDIES

20 Completed, 7 in Progress

KEY PARTNERS

Bank of Sierra Leone, BRAC, International Growth Centre (IGC), Ministry of Health and Sanitation, UNICEF, UNICEF World Bank

KEY RESEARCHERS

Thomas Branstetter (Brown University), Katherine Casey (Stanford University), Deborah Duke (University of Chicago), Rachel Glenister (IFPRI), Anne Karim (Princeton University), Peter Kibii (UC Berkeley), ICRG, Tarek Jari (MIT)

More Evidence

In Sierra Leone, we have continued our global tradition of rigorous, applicable research by building foundational research capacity and generating evidence to reduce poverty and achieve the Sustainable Development Goals (SDGs). Examples of our key research findings are below:

A truth and reconciliation program increased forgiveness, but worsened mental health.
A community-based reconciliation program increased forgiveness toward perpetrators of crimes and significantly increased trust in ex-combatants, but it also worsened psychological well-being—increasing post-traumatic stress disorder (PTSD), depression, and anxiety.

Exposure to political debates bolstered voters' knowledge and changed voting behavior.
Watching screenings of political debates increased political knowledge that changed the way people voted. This intervention reduced a campaign expenditure advantage by candidates, and forced accountability pressures over the spending patterns of elected officials.

Simple bracelets increased immunization rates in Sierra Leone, at a cost of just \$1 per child.
A subtle form of social signaling—bracelets—increased timely and complete vaccination by 34 percentage points at a cost of US\$1 per child, with impacts persisting 12 months after the program rollout. The most effective

bracelet was color-coded to show if a child had completed all five vaccines on time.
