Abstract

Listening to Tajikistan is a nationally representative monthly panel survey of 1300 households. In its 5th year, the survey has collected data over more than 60 rounds. The survey covers shocks, employment, and both monetary and non-monetary dimensions of well-being. An additional COVID-19 specific module has been added to the survey. L2T is being used to monitor the social and economic impacts of the outbreak and to support government communications and social assistance responses.

Project Outcomes of Interest

Food security, employment, incomes, migration, remittances, household shocks, subjective well-being

Partners

[World Bank](#), [UNICEF](#), [JICA](#), [Institute of Economy and Demography](#)

Impact Goals

- Build resilience and protect the financial health of families and individuals
- Improve social-safety net responses
- Promote peace and safety, and improve humanitarian response

Project Data Collection Mode

- CATI (Computer-assisted telephone interviewing)
